

**Project Name: Personal Portfolio Website**

**Project Description:**

The Personal Portfolio Website is a project developed to showcase an individual's professional life to potential employers or clients. The website is developed using HTML, CSS, and JavaScript. It also utilizes popular CSS frameworks such as Bootstrap and Tailwind to enhance the design and user experience. The website is hosted on GitHub, making it easily accessible to visitors from all over the world.

The Personal Portfolio Website serves as a platform to educate people about the developer's professional life, including their skills, education, work experience, and achievements. It also provides a way to contact the developer for potential opportunities or collaborations.

The following table shows the technologies and frameworks used in the development of the Personal Portfolio Website:

| Technology/Framework | Description   |
|----------------------|---|
| HTML                 | Used to structure the website content                             |
| CSS                  | Used to style the website content                                 |
| JavaScript           | Used to add interactive features and functionality to the website |
| Bootstrap            | Used to enhance the website design and user experience            |
| Tailwind             | Used to enhance the website design and user experience            |
| GitHub               | Used to host and share the website                                |

The Personal Portfolio Website is a great way to showcase an individual's skills and experience to potential employers or clients. It is a cost-effective and efficient way to establish an online presence and increase one's visibility in the job market.
